Enamelware **Table Presentation**

Our range of classic enamelware is a traditional yet retro English style. The vitreous, double coated enamel resists stains and scratches and improves product durability. Just like any other ceramic, the outer porcelain layer can chip overtime, especially if dropped revealing the steel beneath it. When this happens the steel below naturally oxidises and the enamelware remains safe to use and adds character.

Seamless Flame Polished Stem

Rim to Foot Tempered

Fully tempered glasses are resistant to mechanical shocks, extending the life of the product by five times, compared with non tempered glass.

• What is Tempered glassware?

Tempering is a thermal process of heating a glass close to melting point then cooling it rapidly. This causes the outer surface of the glass to cool and shrink faster than the inside of the glass wall, creating a tight skin. This closes the many hairline fractures that naturally occur in regular annealed glass and make a vastly stronger product.

• How strong is Tempered glassware?

Tempered glass is 5 times stronger. This is known as Mechanical Shock Resistance, making a cost effective choice.

• Are all glasses fully Tempered?

All glassware with a "T" placed on it are fully tempered from rim to foot both inside and out. Not all manufacturers temper to the same high standards.

• Is Tempered Glassware more resistant to temperature changes?

Fully Tempered items are resistant to 135°C temperature changes. This is tested by taking an item of glass from the oven at 135°C and then plunging it into cold water. The glassware will not shatter or break.

What does Sheer Rim mean?

Sheer rim glasses feature a fine and beadless edge which has been produced to give optimal contact with the mouth, enabling a superior drinking experience.

Hot Drink Glasses Glassware

Suitable for serving hot drinks up to a temperature of 65°C, the perfect temperature for serving lattes and hot chocolates

To reduce risk of thermal shock, ensure the glass is at room temperature prior to use. We do not recommend using boiling water for these glasses.

Double Walled Coffee Glasses

• The double walled construction provides insulation to help maintain drink temperatures whether hot or cold.
